ARLON DICTIONARY:

Permanent Adhesives:	Designed for short, medium and long-term applications. May need heat and/or chemicals to be removed.
Removable Adhesives:	Designed for short-term applications. Can be removed without heat or chemicals, with little or no adhesive left behind.
Clean Removing Adhesives:	An added feature of some permanent adhesives. Up to 30% of adhesive may stay behind during film removal.
Air-Egress:	Air channels in the adhesive that allows air to release when bubbles are formed. Helps for an easier installation. The adhesive used could be permanent or removable.

CHART CAPTION:

DURABILITY:
▼ Years durability for outdoor applications
* Premium Colour Change is rated for an outdoor durability of up to 10 years. For additional details, please see Arlon's Warranty

HOW DOES YOUR BUSINESS BENEFIT FROM
FLITE TECHNOLOGY®?

FLITE Technology® is a lite contact, repositionable system based on a unique adhesive and liner combination. An installer will experience the easiest to apply products in the market.

FLITE Technology® wrap films offer:

- ▶ Superior Repositionability
- ▶ Vibrant & Reliable Print Quality
- ▶ Long Term Bond
- ▶ High Durability
- ▶ Easy & Clean Removability

25% FASTER

FLITE Technology® wrap films allow you to get a vehicle wrapped up to 25% faster compared to other films. Applications on flat surfaces can be done even up to 40-50% faster!

A REAL MONEY-SAVER

Finishing applications faster means more vehicles wrapped in the same time. FLITE Technology® saves a lot of time per vehicle: reduced labor costs will enable your business to thrive.

IMPRESS YOUR CUSTOMERS

With FLITE Technology® wrap films you save time and money, which allows you to lower the costs and offer more competitive pricing to your customers. Your customers will love the precise, vibrant graphics and when it comes to removing the film again you will love the easy and clean removability. The wrapping process will have increased efficiency and amongst other reduce the downtime of fleet which your clients will highly value!

MAXIMUM PRECISION

No more frustration when the graphics need to be repositioned on the vehicle! Applied areas of FLITE Technology® wrap films can be lifted again and again for repositioning until the graphics are precisely in the right place! Once the graphics are in the right place they will stay put, even in deep channels and complex curves.

IT TAKES ONLY ONE

The effortless removal of the liner of FLITE Technology® films reveals the light grey opaque adhesive. The adhesive is non-static, thus does not attract dust and enables to work with larger pieces of vinyls without fearing to get dust on the adhesive. As the squeegee smoothly slides over the vinyl, the wrinkles and bubbles can be pushed out with ease. The effortless application makes it possible for one wrapper to wrap a vehicle by themselves!

“Thanks to FLITE Technology® we can work faster because the film slides so easily over larger shapes. The application time is improved and really more efficient on large surfaces such as heavy trucks. On top of that, we see a superb print quality.”

PREMIUM, CAST NON-PVC PRODUCTS

PERFORMANCE

FLITE Technology provides superior repositionability during installation and a clean removal at the end of the wrap's life.

DURABILITY

Long-lasting high gloss finish, chemical resistance and scratch-recovery properties, where minor scratches will heal over time.

SUSTAINABILITY

Casted from a water-based formulation, these products reduce VOC by 57% during manufacturing and eliminates the release of chloro-chemicals in landfills.

THE FIRST ADDITIONS TO

VITAL.

Arlon's Vital Range redefines premium. This range of Non-PVC products are engineered to deliver the essentials to your success while also prioritizing our planet

Application Tips

Deep Channel

Concave corrugations with a sharp angle on the bottom. Usually on a side and rear of cargo vans.

Flat

Flat doors, trucks sides and rears

Compound Curve

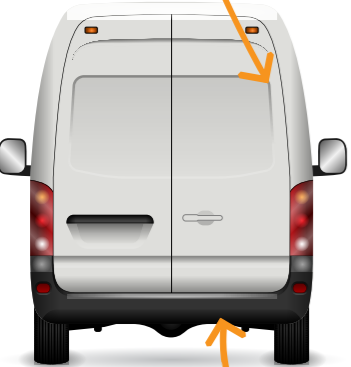

Painted mirrors, bumpers, handles, etc.

Soft Curve

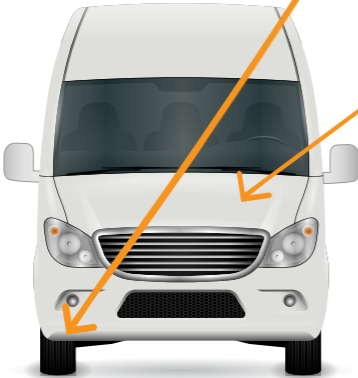

Hoods, fenders, etc.

Low Energy Surface

<38 dyne

Unpainted plastics, rubbers, etc.

Textured

Painted skirts

WHEN TO USE FUSION WRAP AND
WHEN TO USE ARLON CAST FILMS?

FUSION WRAP
is designed for flat surfaces and many complicated shapes, but excluding deep channels. Fusion Wrap requires a relief cut when applied in deep channels.

HIGH-PERFORMANCE CAST FILMS
(Premium Colour Change™, DPF V9700, SLX+®, SLX® Cast Wrap, DPF 6100XLP, DPF 6000XRP, DPF 6000RP) are designed for flat and complicated shapes, including the most demanding channels.

PRO TIPS

Types of FILMS

Cast film begins as a liquid called organosol in which Polyvinyl Chloride (PVC) is suspended in a solvent mixture which exists as a liquid at room temperature.

This liquid is run under a knife which determines the thickness of the film and is then cast onto a liner which determines the surface gloss level or texture of the product. Then, the solvents are baked off leaving a solid PVC film behind.

Cast film has never been stressed or stretched, that is why it does not shrink in a way that polymeric/monomeric films do.

WHAT IS X-SCAPE TECHNOLOGY®?

Arlon's brand name for our air-egress technology which allows air to release through tiny channels in the adhesive-backed vinyl used for fleet, vehicle and general signage applications. X-Scape Technology® allows installers to achieve a speedy installation while maintaining a high enough tack to ensure long-term bond.

♣ Only with lamination Series 3170 - ▲ Only for flat trucks - • 5 years durability when used in combination with this lamination
▪ Available for special order, please refer to your Arlon Business Development Manager - ♦ 1.02 & 1.24 m are only available in 99.94 m roll length, 1.37 & 1.52 m are only available in 45.72 m roll length

Installing Large Interior Wall Graphics
Today, printed interior wall graphics are gradually taking over paint and wallpaper due to their ease of application and removal, customizability and even profitability. In this example, we are installing on a free-standing wall with no ceilings or adjacent walls. This wall is already clean. It is clear of spider webs, removable obstructions and is ready for application. Above all, use the right tools, media, preparation, and application technique. Certainly, this will ensure an efficient, safe, and profitable install. This video will show you how to install large interior wall graphics.

Installing Large Exterior Wall Graphics
Applying exterior wall graphics presents significantly greater challenges than interior walls. Exterior walls present more options in their construction: materials such as concrete, brick, or stucco; textures which range from smooth to extremely textured; and finishes from primed to painted to bare. Digitally printed exterior wall graphics can achieve amazing results that paint simply cannot. So to maintain and improve the appearance of printed wall graphics, wrap it right the first time, on time, every time. This video will show you how to installing large exterior wall graphics.

Flat Substrate Application

At some point in time, you are going to run into a situation where you are going to have to lay out a large graphic by hand onto a flat substrate. When using the proper tools and air egress vinyl, it is going to make your life so much easier. The flat substrate used in this demonstration is a big aluminium panel – one of the most aggressive surfaces on which to lay a graphic. Before beginning the application, make sure your graphic is the proper size for your substrate, including a little extra on all edges for trimming. This video shows how you can use air-egress vinyl to make these application projects simple and consistent.
