

ARLON

PRINT MEDIA PRODUCTS

## Your Partner of Choice

Arlon, established in 1958 near Los Angeles, California, is a leading global manufacturer of pressure-sensitive adhesive vinyls for the sign and graphics industry.

As one of the world's most experienced casting companies, Arlon has gained a worldwide reputation for quality and innovation.

## WRAPITRIGHT.COM

WrapItRight.com gives you access to expert advice and tutorials from industry leaders and specialists!

- ▶ How-to video library featuring vehicle wraps, commercial signage, and digital printing techniques.
- ▶ Create custom playlists and watch videos later.
- ▶ Get updates on Trade Shows and Training Events.

Throughout this brochure you will see companion how-to videos featuring recommended methods and techniques. Videos can be accessed by using the QR code or visiting [wrapitright.com](http://wrapitright.com).

### EUROPE CUSTOMER SERVICE:

ARLON DICTIONARY:

**Permanent Adhesives:** Designed for short, medium and long-term applications. May need heat and/or chemicals to be removed.

**Removable Adhesives:** Designed for short-term applications. Can be removed without heat or chemicals, with little or no adhesive left behind.

**Clean Removing Adhesives:** An added feature of some permanent adhesives. Up to 30% of adhesive may stay behind during film removal.

**Air-Egress:** Air channels in the adhesive that allows air to release when bubbles are formed. Helps for an easier installation. The adhesive used could be permanent or removable.

CHART CAPTION:

**DURABILITY:**  
▼ Years durability for outdoor applications

**TYPES:**  
**C:** Cast   **P:** Polymeric   **M:** Monomeric   **PU:** Polyurethane   **PVDF:** Polyvinylidene fluoride (PVC free)   **PP:** Polypropylene   **PL:** Polyester

**FINISHES:**  
**G:** Gloss finish   **M:** Matte finish   **S:** Satin finish   **L:** Luster   **EG:** Etched glass finish   **P:** Pebble finish   **C:** Canvas

**CLEAN REMOVING:**  
♣️: Clean removing is only for vehicle applications

# HOW DOES YOUR BUSINESS BENEFIT FROM FLITE TECHNOLOGY®?

**FLITE**  
TECHNOLOGY

FLITE Technology® is a lite contact, repositionable system based on a unique adhesive and liner combination. An installer will experience the easiest to apply products in the market.

## FLITE Technology® wrap films offer:

- ▶ Superior Repositionability
- ▶ Vibrant & Reliable Print Quality
- ▶ Long Term Bond
- ▶ High Durability
- ▶ Easy & Clean Removability

## 25% FASTER

FLITE Technology® wrap films allow you to get a vehicle wrapped up to 25% faster compared to other films. Applications on flat surfaces can be done even up to 40-50% faster!

## A REAL MONEY-SAVER

Finishing applications faster means more vehicles wrapped in the same time. FLITE Technology® saves a lot of time per vehicle: reduced labor costs will enable your business to thrive.

## IMPRESS YOUR CUSTOMERS

With FLITE Technology® wrap films you save time and money, which allows you to lower the costs and offer more competitive pricing to your customers. Your customers will love the precise, vibrant graphics and when it comes to removing the film again you will love the easy and clean removability. The wrapping process will have increased efficiency and amongst other reduce the downtime of fleet which your clients will highly value!

## MAXIMUM PRECISION

No more frustration when the graphics need to be repositioned on the vehicle! Applied areas of FLITE Technology® wrap films can be lifted again and again for repositioning until the graphics are precisely in the right place! Once the graphics are in the right place they will stay put, even in deep channels and complex curves.

## IT TAKES ONLY ONE

The effortless removal of the liner of FLITE Technology® films reveals the light grey opaque adhesive. The adhesive is non-static, thus does not attract dust and enables to work with larger pieces of vinyls without fearing to get dust on the adhesive. As the squeegee smoothly slides over the vinyl, the wrinkles and bubbles can be pushed out with ease. The ease of application makes it possible for one wrapper to wrap a vehicle!

"Thanks to FLITE Technology® we can work faster because the film slides so easily over larger shapes. The application time is improved and really more efficient on large surfaces such as heavy trucks. On top of that, we see a superb print quality."

*Féroce Graphics, France*

WHEN TO USE FUSION WRAP AND  
WHEN TO USE ARLON CAST FILMS?

**Fusion Wrap**  
is designed for flat surfaces and many complicated shapes, but excluding deep channels. Fusion Wrap requires a relief cut when applied in deep channels.

**High-Performance Cast films**  
(SLX<sup>®</sup>+, SLX<sup>™</sup> Cast Wrap, DPF 6100XLP, DPF 6000XRP, DPF 6000RP) are designed for flat and complicated shapes, including the most demanding channels.

**Installing Large Interior Wall Graphics**  
Today, printed interior wall graphics are gradually taking over paint and wallpaper due to their ease of application and removal, customizability and even profitability. In this example, we are installing on a free-standing wall with no ceilings or adjacent walls. This wall is already clean. It is clear of spider webs, removable obstructions and is ready for application. Above all, use the right tools, media, preparation, and application technique. Certainly, this will ensure an efficient, safe, and profitable install. This video will show you how to install large interior wall graphics.

Installing Large Exterior Wall Graphics

Applying exterior wall graphics presents significantly greater challenges than interior walls. Exterior walls present more options in their construction: materials such as concrete, brick, or stucco; textures which range from smooth to extremely textured; and finishes from primed to painted to bare. Digitally printed exterior wall graphics can achieve amazing results that paint simply cannot. So to maintain and improve the appearance of printed wall graphics, wrap it right the first time, on time, every time. This video will show you how to installing large exterior wall graphics.

WHAT IS AN  
ETCHED GLASS FILM?  
**SERIES 5400**  
**DPF 5200**

Arlon's Etched Glass vinyl is designed to simulate the look of a fine grain acid etched or a sandblasted glass finish. It eliminates the mess, expense, inconsistency and possible damage to costly glass that these traditional methods can cause.

It may be used on an inner (second surface) or outer layer (first surface) of glass, acrylic or polycarbonate substrates.

The most common use is on second-surface applications, as it helps avoid abrasion and damage due to vandalism.

Arlon's Etched Glass vinyl is also preferred when a uniform, high-gloss surface over the entire sign is required.

♣ 1.24 m is only available in 99.94 m roll length, 1.37 m is only available in 45.72 m roll length  
▲ Only for flat & smooth surfaces • 5 years durability when used in combination with this lamination

PRO TIPS

## Types of FILMS

Polymeric and monomeric films are perfect for short-term and medium-term graphics including temporary signage, indoor graphics and billboards.

**DPF 4550 Range**

- ▶ Best value, multi-purpose polymeric film
- ▶ High quality print and exceptional graphics
- ▶ Available with matte or gloss finish
- ▶ Available with clear or tinted adhesive
- ▶ Available with X-Scape Technology® for easy installation

**Flat Substrate Application**  
At some point in time, you are going to run into a situation where you are going to have to lay out a large graphic by hand onto a flat substrate. When using the proper tools and air egress vinyl, it is going to make your life so much easier.  
The flat substrate used in this demonstration is a big aluminium panel – one of the most aggressive surfaces on which to lay a graphic. Before beginning the application, make sure your graphic is the proper size for your substrate, including a little extra on all edges for trimming. This video shows how you can use air-egress vinyl to make these application projects simple and consistent.

ARLON OVERLAMINATES ARE DESIGNED TO PROTECT & PROLONG YOUR GRAPHIC LIFE

PRO TIPS

Types of OVERLAMINATES

The overlamine must be the same or higher quality than the digital film.  
If you choose a cast vinyl, choose a cast lamination. Your work will be protected in the best way.
